Xingyao Yu

(+49)152 57665184 Xingyao.Yu@outlook.com

EDUCATION BACKGROUND

Sep. 2015-Mar.2018 **MSc Degree** in Optical Engineering, School of Optics and Photonics, Beijing Institute of Technology (BIT)
GPA: 86.06/100

Sep. 2011-Jul. 2015 **BSc Degree** in Applied Physics, School of Physics, Beijing Institute of Technology (BIT)
GPA: 87.47/100, ranking 7th of 55, postgraduate recommended

ACADEMIC EXPERIENCE

➢ **Graduate Research** ***Sep. 2015-2018***

Topic: *Study of Human-Friendly Display Optimization Key Technology of Virtual Reality* (Supervisor: Prof. Dongdong Weng)

at Beijing Engineering Research Center of Mixed Reality and Advanced Display, BIT

- Analyzed the mechanism of the discomfort caused by the display in virtual environment and possible directions of human-friendly display optimization.
- Researched the eyestrain evoked by prolonged use of head-mounted display.
- Proposed a method based on static overwritten symbols for reduction of simulator sickness caused by postural limits, display delay and blurring and oscillatory images.
- Proposed a series of methods based on biological interventions for restraining simulator sickness caused by unpredictable motions in virtual environment.

➢ **Undergraduate Thesis** ***Dec. 2014-Jun. 2015***

Topic: *Research on the access of panoramic image with non-uniform resolution*

at Department of Physics, BIT

- Designed a panoramic image capture system, where the optical centers of two fish-eye lens share the same location in optical path.
- Designed an algorithm to compress panoramic image without affecting region of interest. And the algorithm could be run backwards to obtain a panoramic image with non-uniform resolution.

➢ **Summer School** ***Sep. 2014-Oct. 2014***

Program: *Research on the mechanism of dark matter affecting on the spread of light.*

at Key Lab of Optical Physics, Institute of Physics, Chinese Academy of Sciences (CAS)

- Visited Institute of Physics, CAS; got preliminary knowledge of dark matter.

HONORS AND AWARDS

2015-2018 Model Student of Academic Records (once per year), BIT
2015-2018 First-class scholarship (once per year), BIT
2013-2014 Model Student Cadre (once per year), BIT
2012-2015 Academic Scholarship (once per semester), BIT

INTERNSHIP EXPERIENCE:

[1] Apr. 2017-Sept. 2017 Unity3D engineer trainee
at Beijing Tianhongbo technology co. LTD

Duty: Design the user interface for the major software product and complete the code programing. This software can simulate an air battle depending the battle data.

- The key event during the battle can be located in timeline, like shoot and explosion.
- The multi-level UI panel can be expanded.
- The 2D tags can follow the 3D mobile objects.
- Users can link the modules on UI panel by straight lines.

[2] May. 2016-Sept. 2016 Unity3D engineer trainee
at Beijing zhijing technology co. LTD

Duty: Take charge of the development of a stereoscopic painting application run on Hololens.

- Users can start a line, draw the line and end the line by using “tap” and “manipulation” gesture interface in HoloLens.
